

# IF THEY DON'T BECOME FLIES, THEY DON'T BECOME A PROBLEM.

**F**lies are a nuisance to everyone. But to livestock producers, flies are much more than a nuisance. Flies cost money. They spread diseases that can reduce production, and fly infestations can cause problems in the local community.

Newly introduced NEPOREX® is proven to stop fly larvae from growing into adult flies. NEPOREX attacks fly larvae and prevents them from shedding their skins. Since this is an essential part of larval development, NEPOREX prevents fly larvae from turning into flies. No flies = no problem. NEPOREX keeps house and stable fly larvae from developing into a costly and unappealing fly problem.

## Benefits of NEPOREX:

- Proven, multi-species fly control for horse, pig, cattle and poultry operations
- Minimized risk of house and stable-fly-borne parasite infestation
- Reduced fly nuisance
- Improved farm hygiene
- Fewer complaints from neighbors and better community relations

## How to use NEPOREX:

- NEPOREX® 2SG is a water-soluble granule suitable for dry scattering or spraying
- Can be scattered dry onto wet manure or dissolved into water as per label instructions
- Apply directly onto surfaces where larvae are present

NEPOREX® is a key component of the Fly Control Program, part of Novartis Animal Health's Farm Hygiene Program.

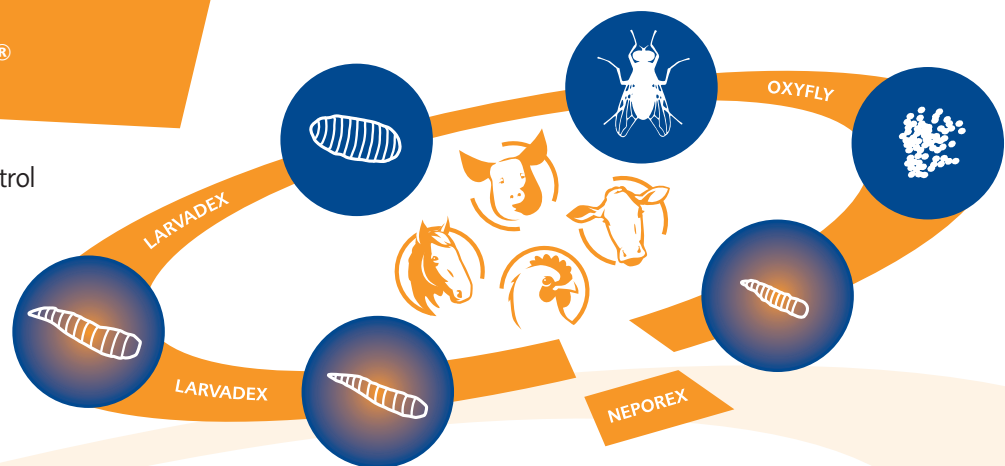

**NEPOREX**<sup>®</sup>  
Proven to prevent flies

# EFFECTIVE FLY CONTROL IS INTEGRATED FLY CONTROL

## NEPOREX®

- Multi-species larvae control
- Scatter or spray

## LARVADEX™

- Convenient, in-feed or spray application larvae control for poultry
- Saves time and labor. No need for manual treatment of large areas of manure – simply add in food or spray

## OXYFLY®

- Superior knockdown of adult flies
- Broad-spectrum insect control
- Use anywhere adult flies are a problem

NEPOREX and LARVADEX stop fly larvae from developing into flies. OXYFLY stops adult flies dead in their tracks.

NEPOREX, LARVADEX and OXYFLY are key components of the Fly Control Program, part of Novartis Animal Health's Farm Hygiene Program.

Always read and follow label directions.
